PERENNIALS

Seed is sown in frames, then transplanted in sterilized soil; again put under glass and the second time transplanted to the field where they are grown under irrigation. This is the reason we can grow larger and much stronger plants than the ordinary run of perennials. Size mentioned is height eventually attained.

A Customer from Missouri Writes:-

The plants are from a to z splendid specimens, and I hope that I can give you this Fall a good sized order for shrubs, because I do know that I will get real plants.

I wish to thank you for handling that order so promptly.

APPLES

Connecticut grown, budded, strictly high grade. All these trees have been twice inspected by Prof. Shaw of the Massachusetts State College for trueness to name. A large majority of buds were taken from the best strains of orchard-bearing trees.
